TECNOTION®

direct drive in motion

IRONLESS LINEAR MOTOR SERIES

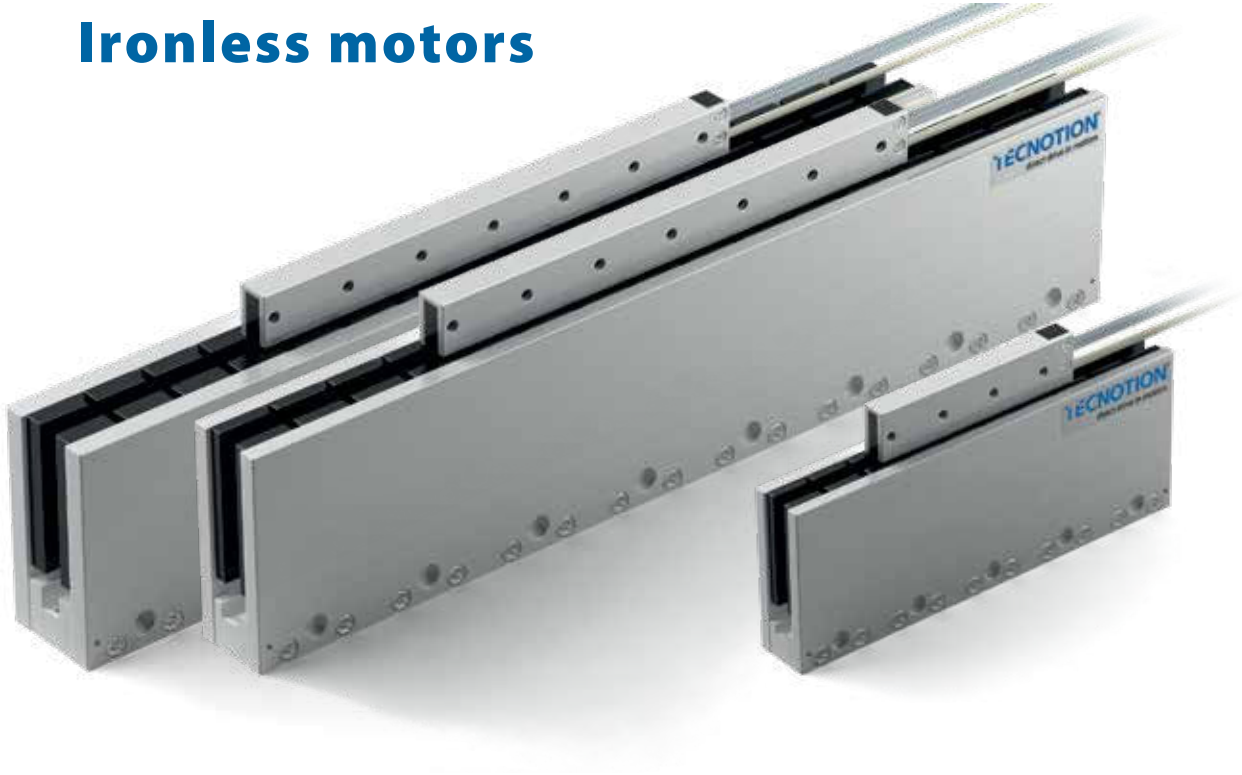
Superior precision

WE DIRECT DRIVE YOUR MOTION TECHNOLOGY

Direct drive motors from Tecnotion are seamlessly integrated into a wide range of applications, including semiconductors, machine tooling, robotics, display applications and printing. As an independent supplier of linear-, torque and vacuum motors, we offer specialized motor technology to place in your motion solutions.

We have distinguished ourselves for almost 30 years with the exclusive development and production of direct drive linear and torque motors. As a result, we succeed in providing the best motor solution for your motion needs, whether it is a catalogue or a custom motor. Thanks to our extensive experience we are used to designing and building any motion requirement with unmatched quality & performance.

Ironless motors



UXX / UXA series

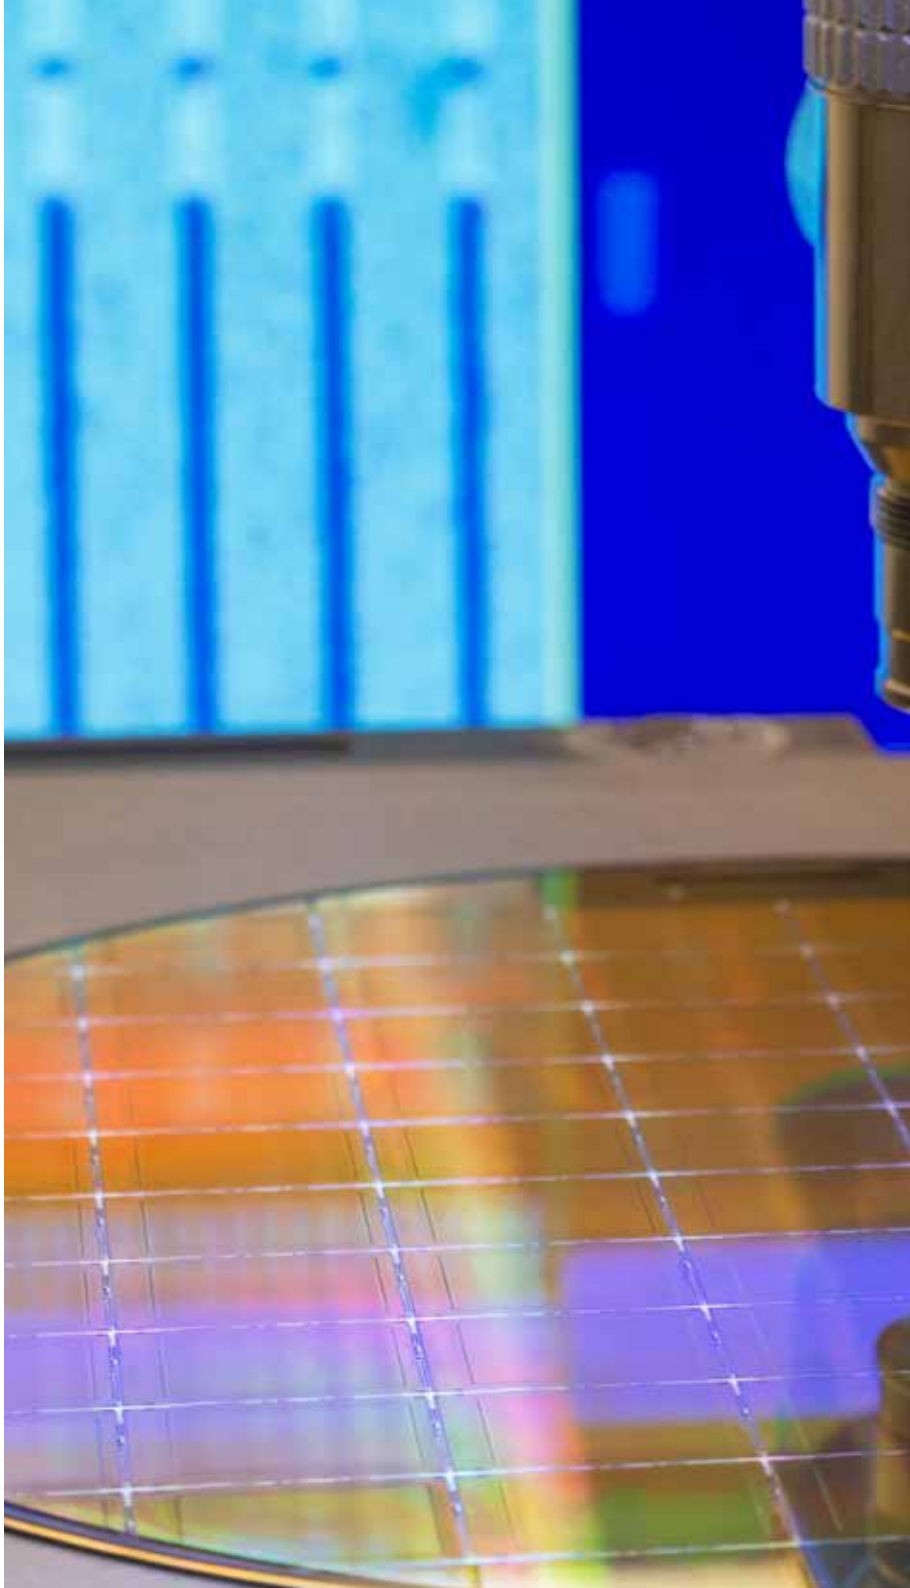
F_p 615-4200 N F_c 120-846 N

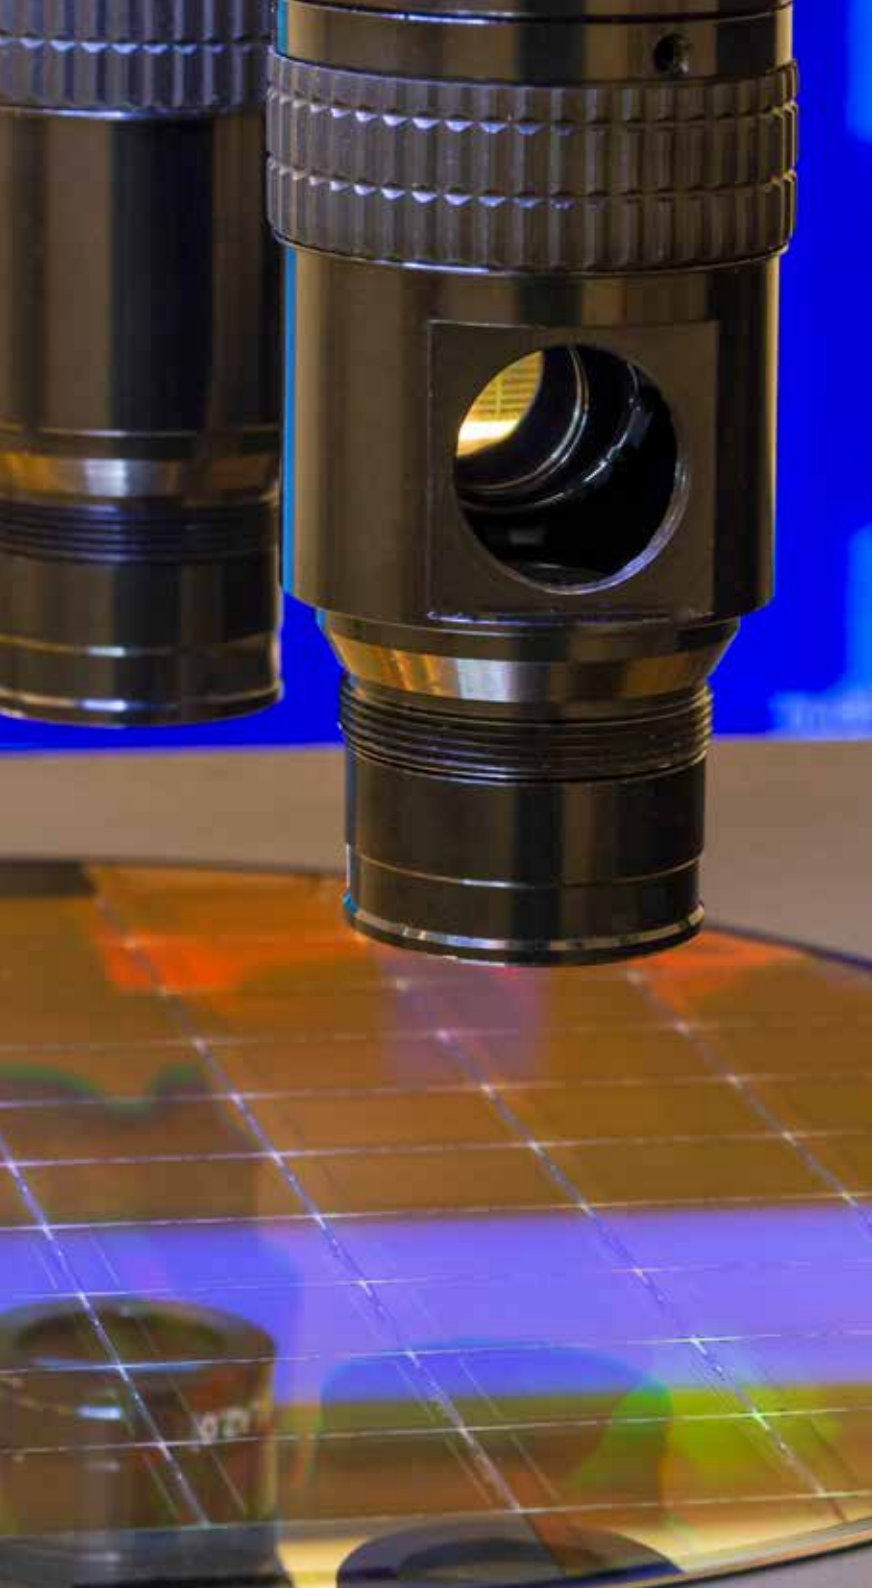
The UXX is the most powerful standard ironless motor we have to offer. It is ideal for heavy duty industrial applications that demand ultra precision and maximum force output. The UXA is the economical alternative to the UXX. It's slightly less powerful, but makes up for this with a smaller footprint and an attractive price tag.

UL series

F_p 240-1200 N F_c 70-350 N

The high-end UL ironless motors are available in various configurations that can easily be adapted to application specific requirements. Because of their high speed, positioning accuracy, zero cogging and attraction force, many UL motors are successfully applied throughout the semiconductor industry.





U	L M	6 12	S N

U = Ironless
L M = Series type
6 12 = Number of coils
S N = Winding type

UM series

F_p 100-400 N F_c 29-116 N

The mid-range UM ironless motors stand out for their extremely high speed and exceptional thermal characteristics which are the result of our unique production techniques. This makes the compact UM motors especially suited for applications in which highly accurate measuring is required.

UF series

F_p 42.5-85 N F_c 19.5-39 N

The UF series is built specifically to sustain very high continuous forces for its footprint, which is only marginally larger than that of the UC. It is exceptionally suited for applications with high duty cycles, for instance in the medical and semiconductor markets or for pick & place systems.

UC series

F_p 36-72 N F_c 10-20 N

The UC is our smallest "off the shelf" motor. Weighing in at just a few grams, this versatile, compact and affordable motor is still able to sustain a continuous force of 10 or 20 N. Due to its low weight it is also suited to operate in a vertical application environment.

Features

Ironless linear motor series

F/cm³

High force density

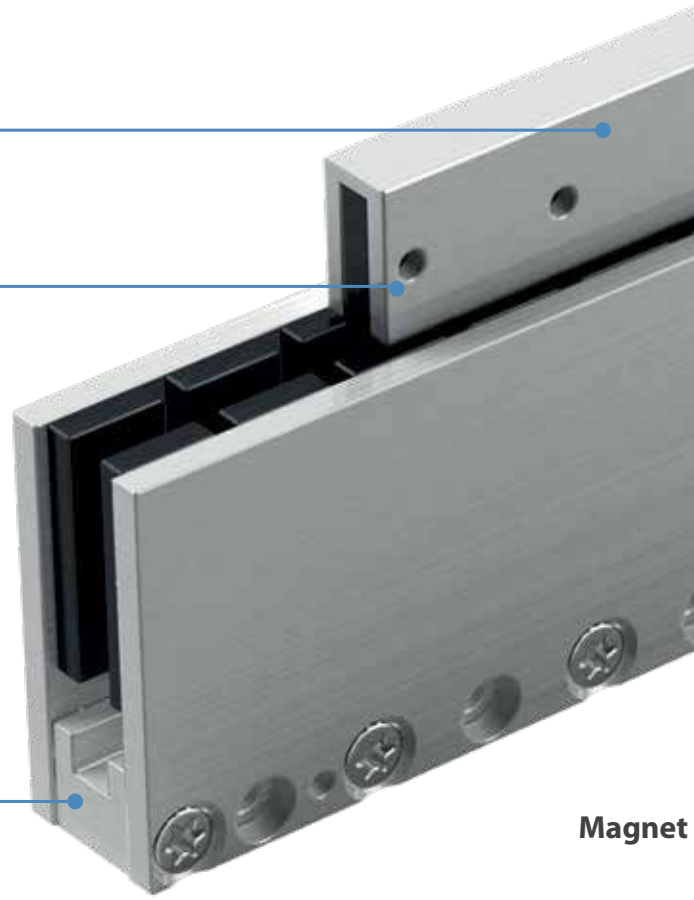
More force in a small design means lowering footprint and it fits better in tight spaces.

High acceleration and dynamics

The outstanding force to mass ratio of the ironless coils enables unmatched system dynamics.

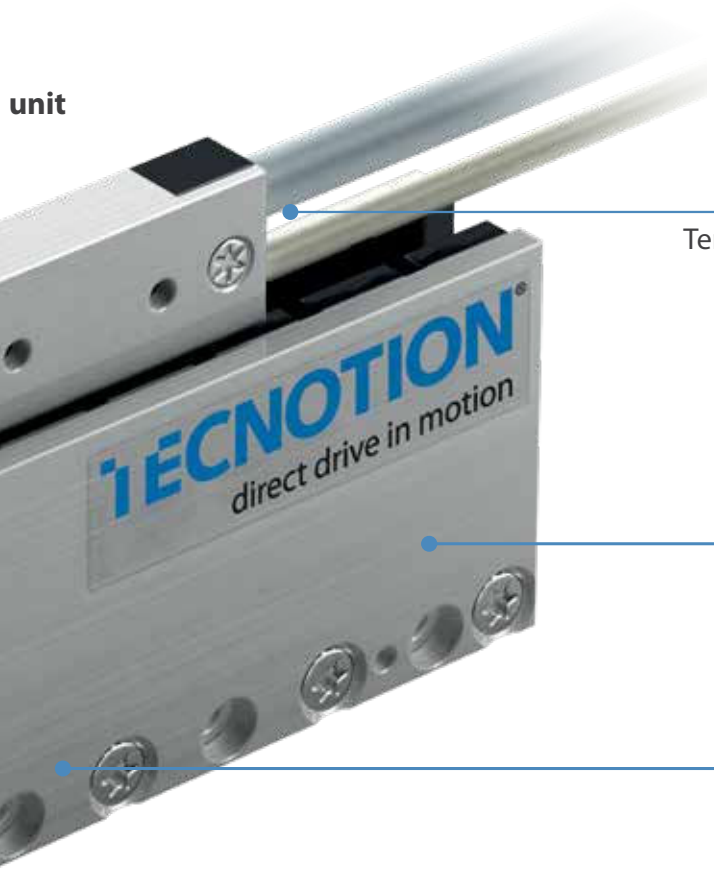
Low thermal resistance

Allowing good heat transfer, achieving an extremely high continuous force for all motors when using a decent size heatsink or active cooling.



TECNOTION direct drive in motion

unit



yoke

Power and sensor cable

Temperature measurement and cut-off sensor

Lifetime

Proven quality due to in-house testing

Manufacturing

Produced under high quality standards

Approved for CSA, CE, UKCA, REACH and RoHS

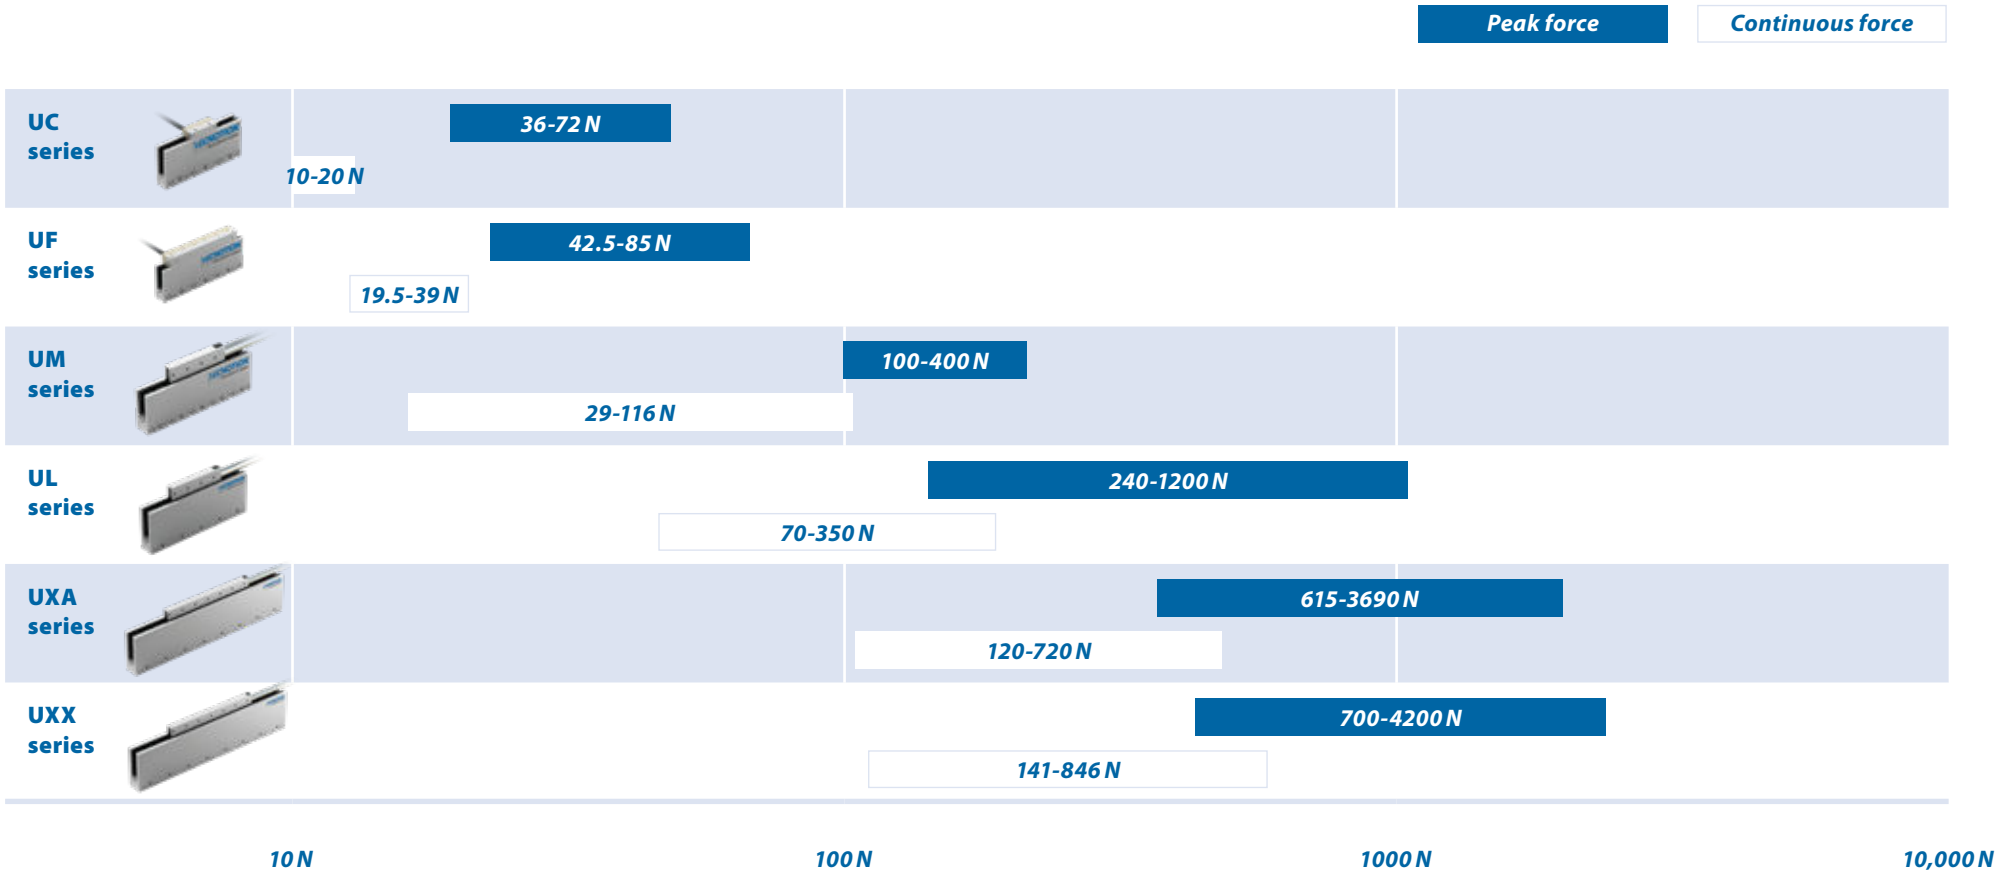
Ironless motors from Tecnotion are approved for CE, CSA, UKCA, REACH, and RoHS (UC and UF series are approved for CE, UKCA,REACH and RoHS).

No cogging, extremely low force ripple

Ironless motors have no cogging effects, offering smooth motion and position accuracy in your application.

Accurate force constant and speed

Ironless motor force range



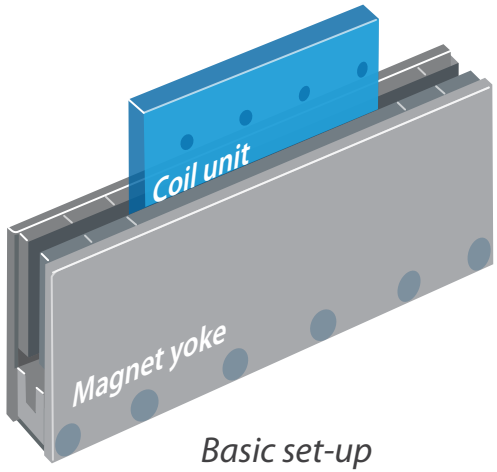
Modular

Motor configurations

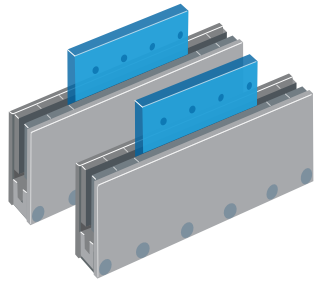
The direct drive technology of ironless linear motors is a perfect way to enhance productivity. There is no attraction force or cogging between the coil unit and the magnet track. This gives ironless motors their light weight, superior precision, a linear force constant, and extremely dynamic velocity, acceleration, and deceleration.

Motors can be mechanically aligned in series or parallel. This allows motors to move on different tracks, distributing even force to a large gantry, or on the same yoke track, enhancing power along a single line. In both cases, the total force of all motors adds up. Standardizing coil assemblies across multiple machines and applications reduces expenses and simplifies field support.

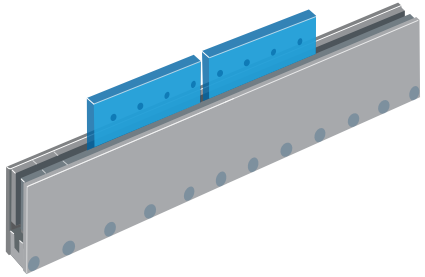
MODULAR SYSTEM All motors can be used in various configurations



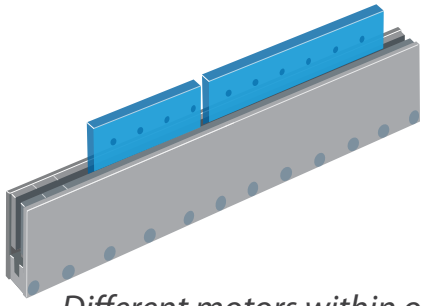
Basic set-up



Parallel coupled coil



In-line on a single yoke



Different motors within one series

Approvals

[1] *These values are only applicable when the mounting surface is at 20°C and the motor is driven at continuous current. If these values differ in your application, please check our simulation tool.*

[2] *Actual values depend on bus voltage. Please check the F/v diagram in our simulation tool.*

[3] *The maximum coil temperature for CSA certification is 105°C. The maximum coil temperature without CSA certification is 110°C.*

[4] *The UXX3S is only available with a FLEX power cable.*

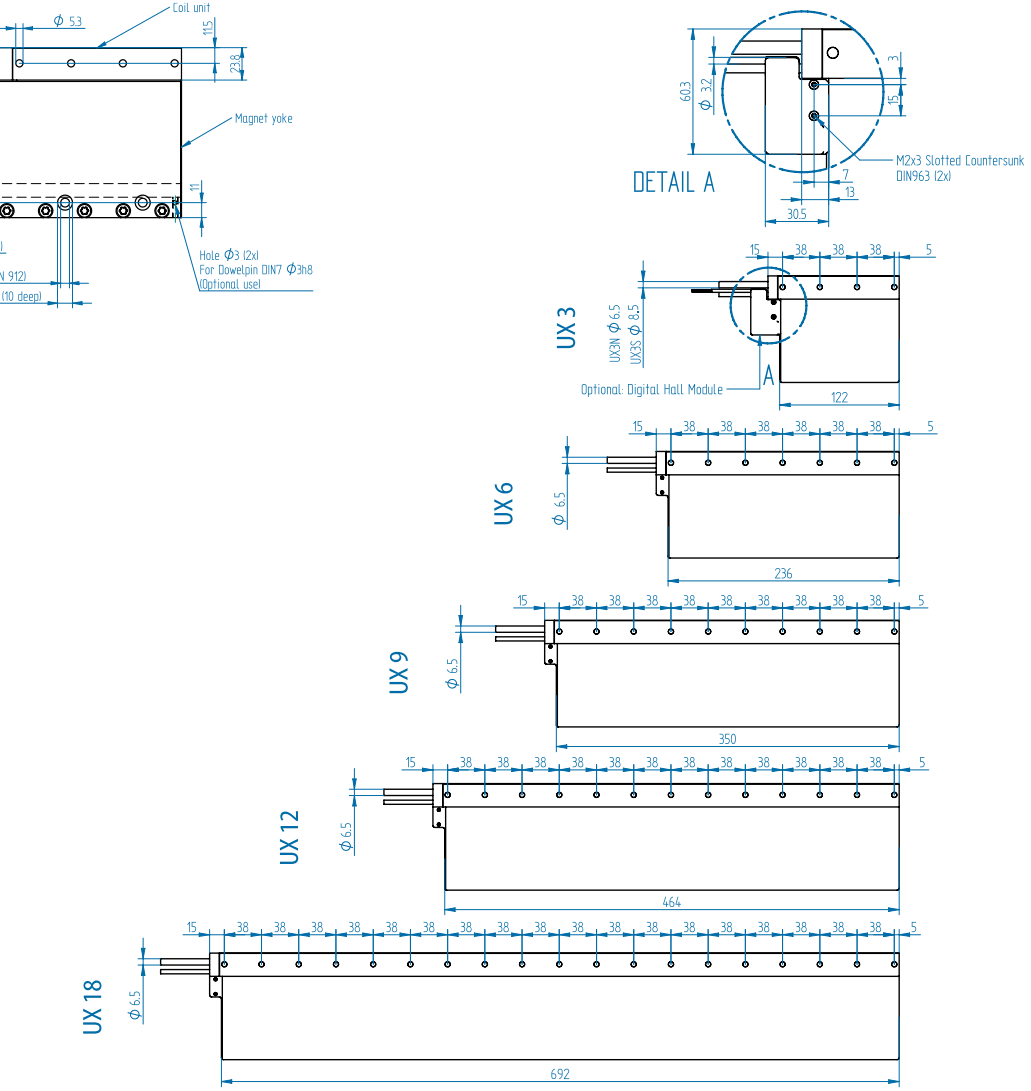
Coil units



Mounting instructions and flatness or parallelism requirements can be found in the ironless installation manual. CAD files and 3D models can be downloaded from our website.

** All sizes are in mm*

Digital Hall module for commutation

Digital Hall sensors can be used to determine the position of the coil unit within the magnetic field for a controller to correctly commutate the phases. If you do not use a controller that allows you to commutate within the servo drive, this module can be a cost-effective alternative.

Each ironless motor series has its own additional digital Hall module. Resolutions of the digital Hall modules are: UC: 2.75 mm; UF: 4 mm; UM: 5 mm; UL: 7 mm; UXA/UXX: 9.5 mm.

Mounting instructions and flatness or parallelism requirements can be found in the iron core installation manual. CAD files and 3D models can be downloaded from our website.

Support

At Tecnotion, we recognize that every use of our motors presents unique circumstances with different needs and challenges. Our team of Sales and Application Engineers have extensive experience in different application scenarios and work closely with our customers to find solutions that perfectly align with their requirements and objectives.

With our commitment to excellence and innovation, we remain steadfast in our mission to provide our customers with solutions that lead them to success in an ever-changing landscape.

Continuous innovation

At the heart of our company is an internal Research and Development (R&D) department that serves as an engine for innovation. This dedication to innovation not only fuels our deep knowledge of manufacturing processes, but also drives our commitment to excel in product design and performance, helping our customers meet the changing needs and expectations of their customers.

In addition to our extensive range of off-the-shelf standard motors, we custom design motors for applications that have more unique requirements. Our team works closely with customers to understand their specific challenges and objectives.

Modern manufacturing

Our manufacturing capabilities are strategically distributed between our facilities in China, Vietnam and the Netherlands, each of which plays a vital role in delivering first-class products to our customers worldwide. This distribution enables us to meet the demands of mass production.

Our competence centre and headquarters in the Netherlands are dedicated to advanced motor technology and are the epicentre of innovation and precision engineering. Custom motors are also built here in our special state-of-the-art clean room environment, with extreme precision and an eye for quality. Tecnotion prides itself on maintaining the strictest quality standards in all facets of our operations. Our plants are ISO 9001 certified.

Global logistics

We ensure that our most popular products are in stock in our warehouses. This setup gives us quick access to our stock, regardless of your location. Whether you are near our European headquarters or on the other side of the world, our efficient shipping network ensures that your orders are processed quickly.

Even during periods of increased market activity, our flexible supply chain allows us to maintain fast delivery times, so your products reach you quickly and reliably. With our unwavering commitment to customer satisfaction and operational excellence, we strive to provide seamless and efficient service throughout the supply chain.

Vacuum linear motors

F_p 100-4020 N F_c 22-698 N

Vacuum Generation 2 motors for powerful and precise processes

Generation 2 vacuum ironless linear motor series is designed with the unique challenges of vacuum applications in mind and based on years of collaboration with high-end semiconductor manufacturers.

Optimal thermal properties, added safety, excellent RGA performance, lower outgassing and flexibility to install, make the Generation 2 vacuum motor series the benchmark for motion in vacuum applications.

www.tecnotion.com/vacuum

Torque motors

T_u 0.64-2202 Nm T_c 0.29-907 Nm

Increased accuracy and dynamic performance of your application

Tecnotion torque motor series features superior force density, low thermal resistance, low cogging and housed design. Motors can be very slim in height but large in diameter (for large axles and turntables) or have a 'height' close to their diameter, resulting in a compact but high-torque motor.

The torque series consists of different outer diameters ranging from 65mm to 485mm for the largest motor and various building heights ranging from 17mm up to 105mm.

www.tecnotion.com/torque

Custom motors

Motor solutions

Adapt standard motor series to meet your needs

In case the standard motor series are not sufficient for your application, it is also possible to have these motors customized in a variety of ways. Customization can range from simple modifications, like adding a connector, to fully tailor-made motors designed from scratch.

Some examples: custom windings, cable confection, additional sensors, additional certifications and customization for vacuum applications. For more information please contact Tecnotion.

Iron core linear motors

F_u 120-6750 N F_c 60-3000 N

Extremely high force in a modular compact design

Designed and constructed with an iron core, these series offer an extremely high continuous force for their size, starting at 60 N for the small TM, up to 3000 N for the water cooled TBW. Peak forces are even higher, reaching up to 6000 N.

A small footprint, modular design, and high force density enable very flexible application designs, using iron core linear motors. Suitable for many applications such as printing, digital cutting, and machine tooling.

TECNOTION® direct drive in motion

Motor simulation tool

Analyze your application

Size your application with the motor selection and simulation tool

Online motor simulation software helps you find the best motor for the application and generate reports within seconds, without having to make time consuming calculations by hand.

The motor sizing simulation tool helps to select the right torque or linear motor, using your application characteristics. The tool will provide you with diagrams for position, velocity, acceleration, jerk, torque, power, voltage, current, temperature and torque vs. velocity.
